SUMMARY

PHP Developer with over 2.5 years of experience in backend development, application maintenance, and API integration. Skilled in developing and maintaining scalable, high-performance web applications with a strong focus on code quality and system reliability. Experienced in working within the US healthcare domain, EU data handling requirements, and ITIL-aligned processes. Adept at diagnosing complex issues and delivering robust backend solutions. Committed to writing clean, efficient, and maintainable code, and seeking opportunities to contribute to innovative, high-impact projects.

EDUCATION

Bachelor of Technology in Computer Science & Engineering Suresh Gyan Vihar University, Jaipur, India

Jun 2018 - July 2022
7.01 / 10 **CGPA**

PROFESSIONAL EXPERIENCE

HCL Technologies, India - Senior Developer   Oct 2024 – present

- Currently working on a US-based healthcare project focused on application maintenance and enhancement of healthcare information systems. The project involves supporting and upgrading PHP-based web applications used for managing medical records, patient data, and insurance workflows, while adhering strictly to HIPAA compliance and security standards. Performed application maintenance, troubleshooting, and bug fixing for critical healthcare modules developed in PHP.
- Followed ITIL best practices in Incident Management, Problem Management, and Change Management to ensure smooth delivery and support.
- Engaged in Root Cause Analysis (RCA) for recurring issues and proposed permanent fixes. Adhered to ITIL-aligned SLAs (Service Level Agreements) and ensured timely resolution of incidents and service requests.

Netleon Technologies, India - Jr .Web Developer   Feb 2024 – Oct 2024

- Developed and maintained the Management Information System (MIS) Clinic software using CakePHP, enabling seamless integration and effective management of various functionalities, such as patient records, appointment scheduling, and billing processes.
- Worked on the development of the Stocks website, which provides comprehensive coverage of NYSE, NASDAQ, OTC, and all US stock exchanges. This website includes features such as stock analysis, market sentiment data, trending stocks data, insider trading information, and social sentiment data. The website was developed using Laravel to ensure robust performance and scalability.

GIPL India – Software Trainee   Apr 2023- June 2023

- Joined the company as a software trainee, where I utilized my knowledge of PHP, JavaScript, and Laravel PHP to perform various tasks and contribute to multiple projects, enhancing the organization's software development efforts.

NLET Infotech, India – Software Trainee   Dec 2022 – Apr 2023.

- Contributed to the development and implementation of a comprehensive school ERP software that includes financial systems, admission systems, and online learning and result systems. Additionally, completed several websites using Laravel, demonstrating my ability to deliver robust and efficient web solutions for educational institutions.

DGTL Mart, India – Software Intern   May.2020 - Sep.2020

- Developed 3 projects during this internship, including the fitness monitoring app. In this app (A reward is given to you when you finish a task. Firebase and Laravel (a PHP framework) expertise are needed for this project.
- Developed an online store portal called COVID-19 E-shop which sell COVID-19 pandemic-related necessities, including like sanitizing chambers, masks, sanitizing pumps, and more than 100 + product were listed and sold. This project was designed and developed on WordPress
